

# Let's Code\_ Your Career through Programming

## Assignment 1

**Project Details:** Hey Coders, you're going to build a contact us page and an about us page for a kindergarten school.

**Contact Us Page:** Imagine you own a school, and you are the principal of that school. Now you are going to build a website for your students and also for others so that they can know about your school. So in your website, you have everything, like: Class room details, teacher details, a home page, etc. But if you don't have the Contact Us page, then how will people contact you? That's why you need a Contact Us page so that clients can contact the business provider. So build a contact us page for a kindergarten school.

**About Us Page:** Imagine here also that your website has all the details like class, contact us page, teacher details, etc., but you don't have an about us page. Then the parents will be confused, as like the website is for coaching, a school or any other special class, etc. That's why the About Us page is also important. So build an about us page for the school.

### **Important Links:**
